Open to full-time and long-term contract remote roles

PROFILE

Full-stack developer working in React/Next.js, Node.js, and Angular, focused on shipping production systems that real users depend on: a 3-court booking platform handling 50+ reservations a week, a guest-and-payments portal for 1,500+ attendees, and a client-facing ordering platform live in production today. Delivered inside a US company's edge infrastructure (Cloudflare Workers, sub-50ms global response times) as a contractor, and run every stage of delivery (architecture, build, deployment, client communication) through my own studio. Comfortable owning a feature end to end or slotting into an existing team's stack and conventions. Background as an electrician and solar technician built the habit of methodical troubleshooting under pressure, which carries directly into debugging production systems.

EXPERIENCE

Founder & Full Stack Developer · [Developing Bridges](#)

May 2025 – Present Remote

- Architected and shipped Abdonur, an ordering platform for a multi-location Arabic food brand with a dynamic product catalog, multi-location routing, and WhatsApp checkout. Largest production project to date.
- Built Mundo Padel Club, a booking system for 3 courts handling 50+ confirmed reservations a week, with full authentication, email confirmations, and in-app cantina consumption tracking.
- Delivered a wedding invitation and guest platform processing confirmations and payments for 1,500+ guests, with real-time pricing controlled from Google Sheets.
- Own the full delivery cycle solo (architecture, development, deployment, and client relationships) for clients in the US and EU, using AI-assisted workflows (Claude, Cursor, GitHub Copilot) to ship faster without cutting corners on maintainability.

Full Stack Engineer (Contract) · [Ewents](#)

Aug 2025 – Mar 2026 USA · Remote

- Built a greenfield internal CRM (Hono/Cloudflare Workers + Supabase/PostgreSQL + Angular 18) covering automated invoicing, commission calculation, and timesheet approvals, removing roughly 80% of the team's manual spreadsheet work.
- Architected an edge microservices backend with sub-50ms global response times and zero-downtime CI/CD deployments.

Electrician & Solar Energy Technician · Self-employed

2017 – 2024 Argentina

- Installed and diagnosed electrical and solar systems under time and safety pressure. That systematic, methodical troubleshooting now shapes how I debug production code.

TECHNICAL TOOLKIT

Core Stack	Next.js · React · TypeScript · Node.js · Angular 18
Backend & APIs	Hono (Cloudflare Workers) · Express · REST · Prisma
Databases	PostgreSQL · Supabase · MongoDB
Infrastructure	Docker · Hetzner (Ubuntu) · Vercel · Railway · CI/CD
AI-Assisted Workflow	Claude · Cursor · GitHub Copilot

EDUCATION

Information Systems Engineering (3 yrs completed)	Universidad Tecnológica Nacional FRC · Córdoba	2013 – 2016
Full Stack Dev Curriculum	The Odin Project · freeCodeCamp	2024 – 2025
